Plant Responses to Hyperarid Desert Environments ...

While deserts are characterized by some people to be only so much bare ground or moving sand, true desert is a complete and ancient ecosystem. Of course, moving sand, grit, salt or rocks do not store much carbon, but when the bare ground of North American deserts is not trampled, biological crusts form on top of almost all bare soil.

Cattle Grazing the Desert Will Not Solve Climate Change ...

Greening Deserts projects are flexible and can be adapted to local conditions and environments. A greening bus, truck or transporter can reach far regions. Simplicity: Sometimes less is more! Great projects are mostly simple or easy to understand and to handle. The goal is to simplify and to optimize everything.

Greening Deserts - Sustainable Projects

A desert is a barren area of landscape where little precipitation occurs and, consequently, living conditions are hostile for plant and animal life. The lack of vegetation exposes the unprotected surface of the ground to the processes of denudation. About one-third of the land surface of the world is arid or semi-arid.
