An iceberg is a large piece of freshwater ice that has broken off a glacier or an ice shelf and is floating freely in open water. Small bits of disintegrating icebergs are called "growlers" or "bergie bits". Much of an iceberg is below the surface which led to the expression "tip of the iceberg" to illustrate a small part of a larger unseen issue. Icebergs are considered a serious maritime hazard. The 1912 loss of the RMS Titanic led to the formation of the International Ice Patrol in 1914. Icebe

Iceberg - Wikipedia
Icebergs or "ice mountains" are large pieces of freshwater ice floating in the open water, derived from broken parts of continental ice shelves or glaciers. Icebergs can be sighted in the open ocean or near the seashore. Interestingly, only the tip of the iceberg is visible above water while nearly 90% of it is under water.
